

Introduction to midfieldr

2019 MIDFIELD Institute

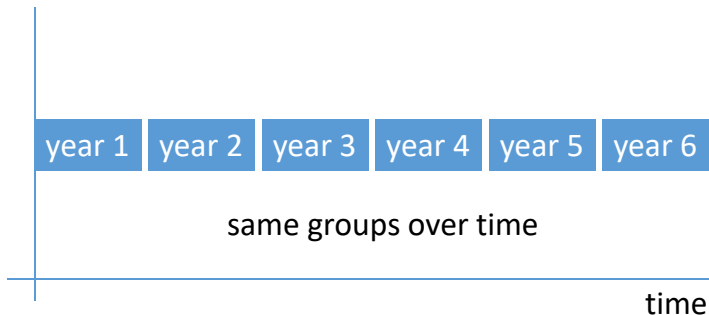

Richard Layton

June 2019

In education, cross-sectional designs are typical

Longitudinal studies offer some advantages

MIDFIELD is a database for longitudinal studies

- 2.2 M undergraduate students at 23 US institutions
- Whole-population data from registrars, 1988–2017
- For more information about MIDFIELD ([link](#))

MIDFIELD data are curated in four categories

 **2.2M students**

R package midfielddata provides a stratified sample

98,000 students

Each observation is a **unique student**

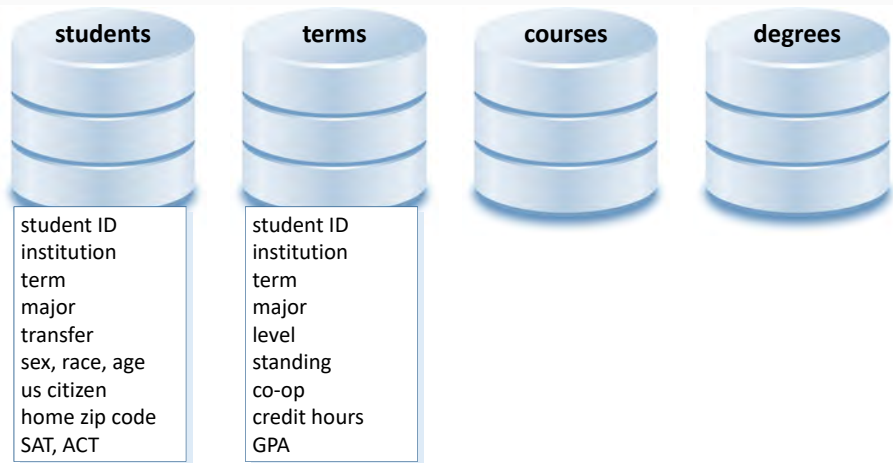

student ID
institution
term
major
transfer
sex, race, age
us citizen
home zip code
SAT, ACT

midfieldstudents

98,000 observations

19 Mb of memory

Each observation is **one term for one student**

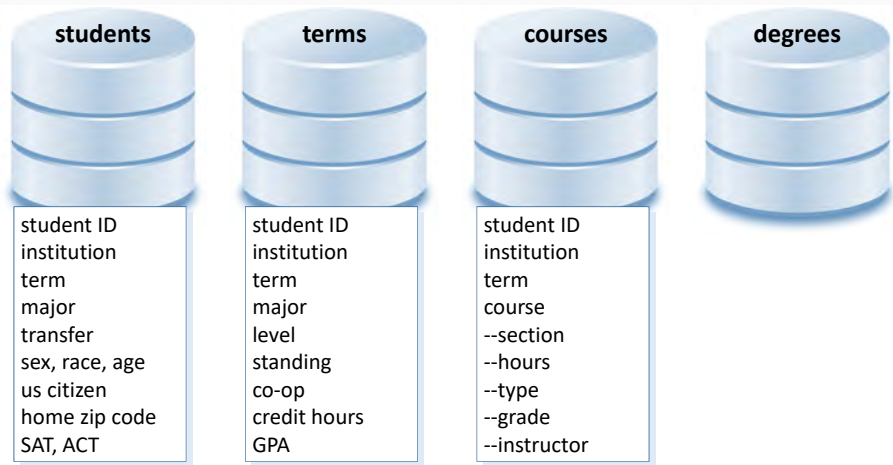

midfieldterms

729,000 observations

82 Mb of memory

Each observation is **one course for one student**

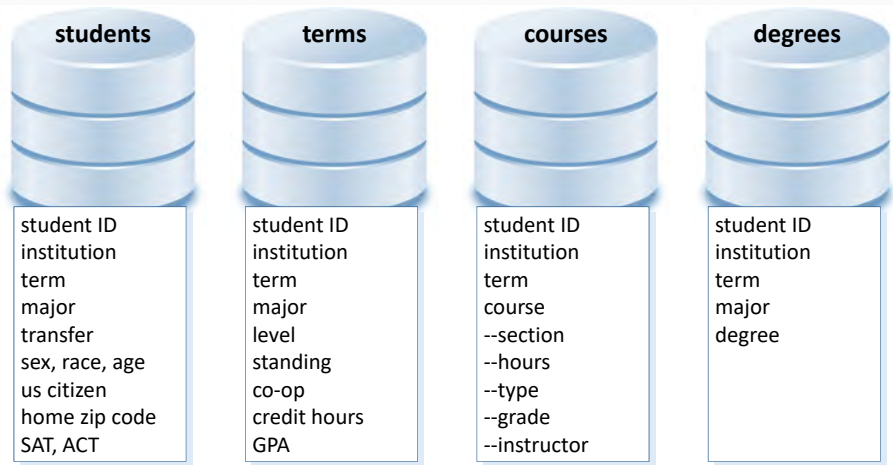

midfieldcourses

3.5 M observations

348 Mb of memory

Each observation is a unique student

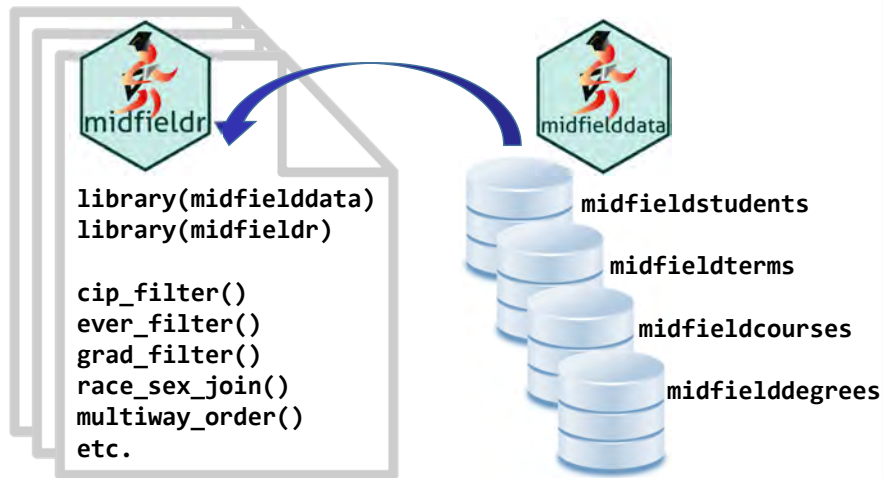

midfieldddegrees

98,000 observations

10 Mb of memory

midfieldr provides the functions for working with **midfelddata**

For more information, see these package resources online

- Package website ([link](#)) for more information and tutorials
- Package reference page ([link](#)) for descriptions of functions
- Package source code ([link](#))

- Package website ([link](#)) for more information
- Package reference page ([link](#)) for data dictionaries
- Package source code ([link](#))
